

**Preparation**

*Never use a damaged saddle*

- Read *all* safety instructions carefully.
- Assemble a supply of towels and small pillows—you will need them for raising and lowering your anatomy under the bouncer.
- The bouncer saddle can be ridden as is, but most people will want to use one of the following options:

**Basics**

*Watch for tipping hazard*

- The challenge of using the bouncer lies mostly in learning how to quickly position your anatomy on and around it.
- Remember the specific arrangements of towels and pillows that work for the positions you typically use.
- Learn the names of the grooves (or make up your own). Most bouncer positions cannot be easily described, and clear communication is always important in bed.
- Very few people will find all the grooves comfortable. The key is to find the ones that work best for you.

**Technique**

*Use only water-based lubricants*

*225 pound weight limit*

- The bouncer is about finding a groove and holding it to climax—it's not for extreme sex or constantly shifting styles.
- Start with the trot and flexer and learn to enjoy them fully before moving on to the other positions. Bounce gently at first and let the groove build slowly.
- A slight flexing of the hips will position him up or down under the saddle, allowing him to control the level of penetration very precisely with almost no effort.
- Lower the bouncer onto the party already lying in position.

**TROT**

The classic bouncer groove. The convex saddle shape gently compresses her anatomy for extra sensation. Alternate with flexing for a nuanced performance.

**FLEXER**

Rock back on the rounded frame for a sensual, nuanced ride. Alternate with trotting for variety. Reverse for intimacy. Place his legs through bars as shown to prevent tipping.

**HAMMER**

Extra control for her, with an exotic clamping action on the upstroke. Have her grip the frame and pull down for greater penetration.

**BLISS BOX**

Give her the full treatment. A rock-hard shaft and a pair of loving hands at the same time render a potent, soothing climax. Position next to bed for back support.

**DOGHOUSE**

Throw her over the doghouse—a natural for doggy-style lovers. Allows her to masturbate comfortably while enjoying vigorous rear entry.

**CAT CAGE**

Get in the cage for her intimate oral pleasure. Have him wrap his arms around her thighs for easy vertical positioning. Always sit carefully on an occupied bouncer.

**FLYING CARPET**

One of the most intense grooves in the gallery, and one of the most challenging. Use a towel on the saddle to prevent slipping and watch balance at all times. Position away from hard objects.

**LAMMER**

A playful groove that's perfect for impromptu scenarios and risky situations. A gentle rocking motion sends her back and forth on his shaft. Always keep bouncer planted firmly against wall.

**PRONGER**

Armchair sex has truly arrived. Just slip his shaft through the hole and line her up for pleasure. Watch for tipping. Always position with back to bed or other supporting object.

**SHAFTER**

Extra control and authority for a position that demands a strong performance. Have him go "hands only" for a more athletic groove—just curl legs over thighs.

**PLUNGER**

Soothing penetration in the comfort of a loving embrace. Let him bounce her for a special synergy. Position next to bed for back support.

**FLOWJOB**

Intensely pleasurable oral satisfaction. Horizontal orientation yields maximum output. Keep feet planted on ground—never go "hands only" in this position. Always lie carefully on an occupied bouncer.

**SIXTY-NINE**

A classic, now updated for ease and comfort. Put a thick towel down on the saddle for her comfort. Always lie carefully on an occupied bouncer.

**NINETY-SIX**

A previously rare version of sixty-nine, now an easy position with more control for both partners. Keep feet planted on ground—never go "hands only" in this position. Always lie carefully on an occupied bouncer.

**THROTTLE**

Perfect for a slave scenario. Let her control his tongue action by his joystick—just work out a set of signals. Always sit carefully on an occupied bouncer.

**MILK RUN**

A tricky old favorite, now a sure thing—just slip her breasts around his shaft and have him bounce her. Combine with hot trot for extra pleasure.

**ARCH ANGEL**

You just have to try it to believe how good it feels. A rhythmic bearing down does the trick. Lubricate just her arches and use a towel on the saddle for stability.

**FLYING FIST**

For the hand lover who likes an extended pleasuring. Even a frenzied beating can be maintained for a long time. Use two hands for tough jobs.

**HOT TROT HOT FLEX**

Masturbation's never been like this—just place a mounted vibrator under her bouncer. The hammer and flying carpet also work. Use a setup that prevents over-penetration.

**TWEAKER SPIN DOCTOR**

Tie her down for sensual nipple-tweaking, or put spinners on her for a feverishly visual brand of coitus that delivers a specially heated climax. Always use highly elastic cord for safety.

**CATCAM**

Use a mirror to watch the scene underneath.

**JOY CIRCUIT**

An erotic feedback loop, amplifying need and gratification in quickening circles to explosive release. Always sit carefully on an occupied bouncer.

**GIVE-N-TAKE**

Very challenging for her, but one of the most intense acts of its kind—a psychosexual experience to be savored and prolonged. Lubricate the saddle for best results.

**INSPECTION**

Confidence is sexy, and you can't be confident about your bouncer unless you check it regularly. See safety instructions for full details.

# 4 ASSEMBLY

## 1 Preparation

You will need a phillips screwdriver and a pair of pliers. Identify the following:

- Saddle (1)
  - Frame pieces (2)
  - Coupler bars (2)
  - Fastener set (40 pcs.)  
10 10 20
- Extra fasteners may be included. Keep as spares.

## 4 Fasteners

From top, each bolt passes through a washer, then the folded saddle layers, then another washer, then into a cap nut. Tighten bolts firmly, but do not overtighten. Use caution as fasteners may be unexpectedly flung by unfolding saddle. Finish one side first then move to the other.

## 2 Frame

If necessary, twist foam grips to line up with frame ends. Insert coupler bars into frames and slide frames together.

## 3 Saddle

Inspect saddle for damage (*stop and contact Erovision if you notice damage*). If necessary, twist foam grips down to make space for saddle. Place saddle over frame. Saddle should *not* cover foam grips at edges. Center saddle on frame. Fold one end around frame and line up bolt holes.

## 5 Finish

Assembled bouncer should appear as shown. Make certain saddle is centered and twist foam grips up to meet saddle edges. Make certain all fasteners are correctly installed with washers. Wipe down saddle.

## 6 Test

Put the bouncer on the floor and set a pillow under it. Straddle the saddle and lower yourself gently onto it. Initiate a gentle bounce and build gradually for at least three full minutes to test the integrity of the saddle. As you do so, get a feel for the balance required. Proceed to the groove gallery.

# WARRANTY

## Erovision Limited Warranty

Erovision warrants its bodybouncer products to be free from defects in material and workmanship under normal use and service conditions. The various component parts of the bodybouncer are warranted as follows:

Steel frame - 90 days; Steel coupler bars - 90 days; Steel fasteners - 90 days; All other components are sold without warranty but may be replaced if damaged on arrival. Do not attempt to use a damaged saddle.

All warranty coverage extends only to the original purchaser from the date of purchase (or the ship date if the product was back-ordered). Erovision's obligation under this Warranty is limited to replacing or repairing the product, at Erovision's option. All products for which a warranty claim are made must be accompanied by dated record of purchase. All returns must be preauthorized by Erovision. Preauthorization may be obtained by visiting [bodybouncer.nl](http://bodybouncer.nl) or by writing to the address provided below. This Warranty does not extend to any damage to a product caused by or attributable to freight damage, abuse, improper usage or repairs not provided by Erovision, nor to products used for commercial, professional or rental purposes. No other Warranty beyond that specifically set forth above is authorized by Erovision.

EROVISION IS NOT RESPONSIBLE OR LIABLE FOR INDIRECT, SPECIAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THE BODYBOUNCER OR OTHER COSTS OR DAMAGES SUCH AS ECONOMIC LOSS, LOSS OF PROPERTY, LOSS OF REVENUE OR PROFITS, LOSS OF ENJOYMENT OF USE, COST OF REMOVAL, COST OF ASSEMBLY, MEDICAL EXPENSES OR OTHER CONSEQUENTIAL DAMAGES. SOME COUNTRIES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES. ACCORDINGLY, THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

THE WARRANTY EXTENDED HEREUNDER IS IN LIEU OF ALL OTHER WARRANTIES AND ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE IS LIMITED IN ITS SCOPE AND DURATION TO THE TERMS SET FORTH HEREIN. SOME COUNTRIES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS. ACCORDINGLY, THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

USE OF THE BODYBOUNCER EXPOSES THE USER TO THE RISK OF SERIOUS INJURY. ALWAYS FOLLOW THE INSTRUCTIONS AND WARNINGS PROVIDED WITH YOUR BODYBOUNCER. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM COUNTRY TO COUNTRY.

# SAFETY

There are two major risks to be aware of:

Sometimes you can ignore product safety warnings. This is not one of those times. You *must* read and understand the information presented here to safely use your bouncer.

Saddle Failure

Tipping

**Saddle Failure** The bodybouncer saddle is made of an extremely durable natural rubber compound that is capable of withstanding enormous stress. However, like all rubber products it must be protected as follows:

- Cuts: Even a cut as small as 1/4" on a saddle edge can widen suddenly under load. You *cannot* use a bouncer whose saddle has been cut. **A damaged saddle is a ruined saddle.**
- Oil: Never expose the bouncer saddle to oil or petroleum products of any kind. This includes petroleum jelly, mineral oil, baby oil, or any other substance that is not a 100% water-based lubricant.
- Weight limit: Observe the 225 pound weight limit at all times. Avoid putting all weight down on one side of the hole.
- Cleaning: Clean the bouncer only with water and (if necessary) a mild detergent that is oil and solvent-free.
- Exposure: Store the bouncer out of direct sunlight.

To further minimize the risk of saddle failure, you are strongly advised to observe the following precautions:

- **Every time** you plan to use the bouncer conduct a quick examination of the saddle first to verify that it's undamaged.
- **Every time** you plan to use the bouncer put a pillow under it and take ten hard bounces first.
- Approximately **every five hours** of use you should unbolt the saddle and examine its hidden areas for wear. The saddle will steadily abrade at its mounting regions, and when noticeable grooves have formed in the rubber it is time to replace it. **Failure to replace the saddle when required can and will eventually result in saddle failure.**
- Discard any bouncer saddle older than three years, or any saddle that shows cracking or stiffness.

**Tipping** Several popular bouncer positions (the "flexer", "pronger" and "hot flex") involve rhythmically rocking back on the rounded frame. When executed with care this is perfectly safe. However, **the bouncer will tip uncontrollably beyond a certain point**, mandating the following precautions:

- Always position his legs through the bouncer frame when executing the "flexer", such that he can prevent the bouncer from tipping back onto him. For additional security he can also grip the bouncer frame with his hands.
- Never execute the "flexer" or "hot flex" any place where the rider could tip and fall from a height or onto a hard object.
- Always execute the "pronger" with the rider's back to a supporting object, thereby preventing uncontrolled tipping.

**Additional** Use only on stable surfaces without hard objects nearby. Do not immerse frame in water or allow water to collect inside foam grips. If you have a physical or mental condition that could be aggravated by using the bouncer (including a latex rubber allergy) you are strongly advised to consult a physician first (bring this document with you to illustrate the activities involved). Discontinue use immediately and see a physician if you detect *any* abnormal physical response to using a bouncer. Do not substitute parts. Keep away from children.
